Implementing your idxcellent™ iframe code

Most websites are built with a header, body, and footer. This example explains the process of adding the **idx**cellent™ Iframe Code to the body of your website. In this example, the header and footer are centered on the website and the idxcellent™ search interface is centered on the website.

Note: The following instructions were created for experienced HTML programmers.

Setting up your HTML code

In this example, we are going to use 's as the container element to setup your search interface and center the interface in the middle of the browser window. In order for this to work, you will need to copy the Code from the **idx**cellent™ setup page then paste that code into your HTML page.

```
<!DOCTYPE html PUBLIC "-//W3C//DTD XHTML 1.0 Transitional//EN"
"http://www.w3.org/TR/xhtml1/DTD/xhtml1-transitional.dtd">
<html xmlns="http://www.w3.org/1999/xhtml">
<head>
<title>idxcellent&trade; example</title>
<style type="text/css">
body {padding:0px; margin:0px;}
div {margin-left:auto; margin-right:auto; width:932px; }
.idx-header {border:1px solid transparent; border-bottom:none; text-
align:center;}
.idx-body {}
.idx-footer {font-size: .7em;font-family:Verdana; border-top:none; text-
align:center;}
</style>
</head>
<body style="padding:0; margin:0;">
<div class="idx-header">
<img src="images/header.png" width="935px" />
</div>
<div class="idx-body">
<script type="text/javascript"
src="http://www.dev.themls.com/IDXNET/Scripts/idxwidget.js"></script>
<iframe id="Iframe1" style="padding:0; margin:0; padding-top: 0px; border:0px; border:1px
solid #949793; background-color:#b7b7b7; " scrolling="no"
src="http://www.dev.themls.com/IDXNET/Default.aspx?wid=CG9Atj%2fV2MXwgVaUKuBHtSogjg9NU393
1cpRi1%2fNzUQEQL" width="933px" height="900px"></iframe>
</div>
<div class="idx-footer" style="">
<p>

</p>
</div>
</body>
</html>
```

HTML code overview

The code that you have inserted into your HTML page has three sections:

Container Header - Used for a logo and links to important information on your website.
Container Body –This is where the Code for the **idx**cellent™ Iframe will be posted.
Container Footer - Used for copyright information.

The first container is the main header in the example. The container is used for the logo and additional links. In the example, the image has a size of 935px. The Iframe is set to a width of 933px with HTML borders set to transparent. The image needs to be 935px to account for the HTML borders that are set to transparent in the HTML header. If you were to make the image 930px the size of the frame, header, body and footer would be miss aligned.

The second container is used for the Iframe code. In the paste your **idx**cellent™ Iframe code. If you don't replace the current code your website will not work with the website URL. Please make sure the correct code has been placed in the .

The third container is used for copyright and additional links. For this section the current design may need minor adjustments in the css. For instance, in the example, the text in the footer is aligned to the center.

***Important WordPress users**

Any settings in installed plugins which prevents Query String parameter would cause Custom Links to not work.
For example a popular plugin called **Word Press SEO** has a setting called:
"**Redirect ugly URL's to clean permalinks. (Not recommended in many cases!)**", this should **NOT** be checked.
